Election/Restrictions

The instant application was remanded to the examiner 9/30/03. The rejection of record was vacated. The rejection has therefore been set aside or voided. The rejection no longer exists. The board has indicated in the remand that it appears that the two "very different methods" were not individually discussed and that the invention of claim 9 was not specifically addressed. Upon reconsideration of the pending claims, it has become apparent that the search and examination of the full scope of the different inventions (the Board has indicated at page 5, for example, that the claims were not construed broadly enough) has become a burden on the examiner and the application is restricted for that reason and the reasons set forth below. In order to better provide a quality examination the following restriction is imposed.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, drawn to a method for detecting the presence of or predisposition to an ectodermal disorder, classifiable in class 435, subclass 6.
- II. Claims 10-15, drawn to a method for modulating the functional expression of a TAJ gene or gene product via the use of anti or intrabodies, classifiable in class 514, subclass 2.
- III. Claims 10-12, 15, and 16, drawn to a method for modulating the functional expression of a TAJ gene or gene product via the use of antisense

Application/Control Number: 09/490,187

Art Unit: 1635

oligonucleotides that bind to a TAJ transcript, classifiable in class 514, subclass 44.

IV. Claims 10-12, 15, and 17-21, drawn to a method for modulating the functional expression of a TAJ gene or gene product via the use of oligonucleotides that bind to a TAJ gene, classifiable in class 514, subclass 44.

Claims 10-12 and 15 are generic to invention II-IV and will be examined limited to the invention elected.

Claim 9 link(s) inventions II-IV. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claim 9. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Application/Control Number: 09/490,187

Art Unit: 1635

The inventions are distinct, each from the other because of the following reasons:

Inventions I and (II-IV) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are different methods that are mutually exclusive since they are methods that use different method steps that result in different ends. The method of group I results in the detection of a presence or predisposition to an ectodermal dysplasia while the methods of groups II-V result in the treatment of disease, for example.

Inventions II-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The invention of group II, for example uses antibodies that inhibit the activity of a protein. The method of group III, for example, uses an antisense oligonucleotide, which binds to and inhibits the expression of a targeted transcript. The invention of group IV utilizes an oligonucleotide that binds to a TAJ gene and may correct a mutation therein, for example. The different methods clearly use components that utilize different modes of action, for example.

Application/Control Number: 09/490,187

Art Unit: 1635

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean R McGarry whose telephone number is (571) 272-0761. The examiner can normally be reached on M-Th (6:00-4:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John LeGuyader can be reached on (571) 272-0760. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308-0196.
